## Press Release

### **RE: MicroVas® Receives National Recognition From The National Association Of State Veterans Homes (NASVH)**

State Veterans Homes are one of the largest long term care providers in the United States. During FY 2005, State Veterans Homes furnished 6,852,875 days of nursing home care and 1,477,885 days of domiciliary care. As of February 13, 2006, there were 133 State Veterans Homes in 49 states and Puerto Rico with 30,255 total beds.

During its 2006 national convention held in Bloomington, Minnesota (July 15 to July 19), over 40 vendors exhibited their products and Veteran Home representatives from around the country attended. neuroVasix, Inc., the world-wide exclusive marketer of Microvas® technology, presented the benefits of its vascular technology to the NASVH and attracted more activity and interest than any other vendor, according to convention representatives. As a result, Microvas® was presented with an award as the Outstanding Vendor of the conference.

The Oklahoma State Veteran Homes has purchased 10+ MicroVas® machines. Currently, we are working with representatives from other states to make MicroVas® available to veterans in their facilities.

The MicroVas® vascular technology is a patented technology utilizing an electro-inducing/stimulating, deep layered muscle contraction wave form that treats a wide range of medical conditions including, but not limited to, neuropathies, slow-healing wounds, decubitus ulcers, sports injuries, carpal/tarsal tunnel syndromes, incontinence and pain management.

**neuroVasix, inc, the worldwide exclusive marketer of MicroVas innovation is a Delaware corporation with manufacturing and operations located in Broken Arrow, OK, sales and marketing in Scottsdale, AZ and corporate headquarters in Orlando, FL.**
